

I have over 30 year's experience of working within investment banking/front office trading environments, as a technologist. I have a consistent track record of delivering large complex programs, leading global teams, defining and driving technology architecture and strategy, and delivering large scale change under fixed and tight deadlines.

I have a comprehensive technical and business background, with extensive domain knowledge of front office systems, and back office trade processing, across securities and OTC derivatives. In addition I have in-depth knowledge of Compliance systems, including anti-money laundering, trading surveillance, voice and e-mail retention, and regulatory reporting (position, transaction and trade), and have worked extensively with Compliance and Legal, as well as with external counsel and regulators, on regulatory matters. I have also been responsible for the definition and implementation of control frameworks across the bank's products and flows.

I have managed large global engineering teams, based in Zurich, New York, Salt Lake City, Bengaluru and Hong Kong, and also delivered large global programs. I also have experience of managing large complex infrastructure programs. I have extensive experience in program management, and managing large global teams, in a matrix organisation.

My background is technical and I have significant coding experience, as well as significant stakeholder management experience, at senior levels. I also have a MSc in Business Systems Analysis and Design.
